

# INTELLO SMART SERIES

Smart water softening technology for smart home

Cost saving

Bath in comfort

Brighter and cleaner clothes

Longer lasting appliances

Green and eco-friendly

# INTELLO SMART SERIES

Hard water is hard on your Home, as it brings undesirable elements (calcium, magnesium, Chlorine, Iron and sediments) from the wells or Municipal water supplies. These impurities impact the plumbing systems (appliances), linens, glassware and many more household items. In turn, they effects your budget.

Pentair Paramount Pure, now brings to you, Intello Smart Softeners, our highly technological water softening systems. Available in two different models - Medium and Maxi, especially developed for residential and light commercial applications.

## THE PROBLEMS RELATED TO HARD WATER

- ↻ White traces
- ↻ Scale build
- ↻ Clogged pipes
- ↻ Irritated skin
- ↻ Rough and scratchy laundry
- ↻ Over consumption of energy
- ↻ Decreased life expectancy of household appliances
- ↻ Overuse of cleaning products

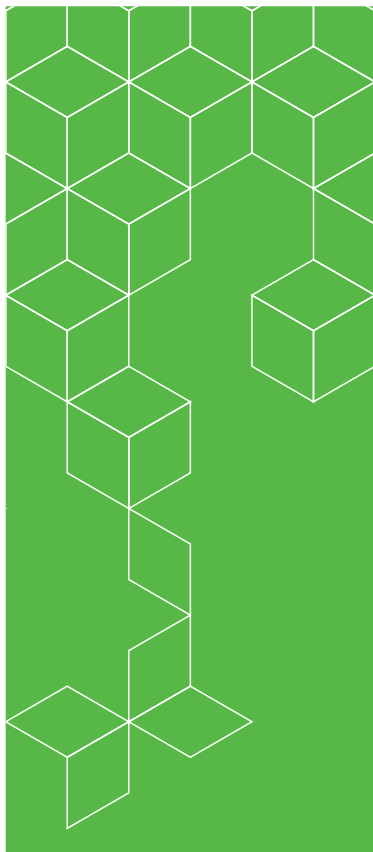

## THE SOLUTION TO HARD WATER

Water softeners are a simple and reliable solution for removing limestone from water, thus eliminating the deposits of scale in your home. By exchanging the magnesium and calcium ions into sodium ions, the softener allows you to get fresh, soft water in the whole house which, contrary to popular belief, is perfectly drinkable and does not have a salty taste.

The installation of a water softener is a lasting solution as it can work for many years, as long as maintenance is carried out once a year by a professional.

# INTELLO SMART SERIES - Features

## Intello Smart 3.1V

Special Cation Exchange Resin

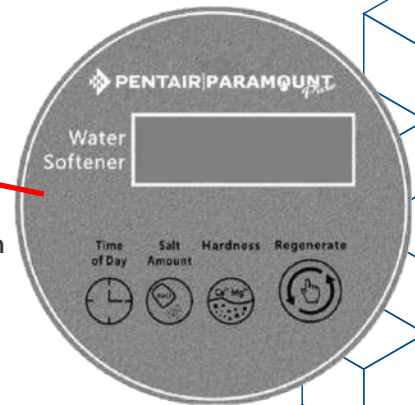

High Performance Fiberglass & Resin Tank

Smart Control Valve with Simple operation (Fully Automatic Regeneration)

Drain

## Intello Smart 4.1V

Bypass Valve

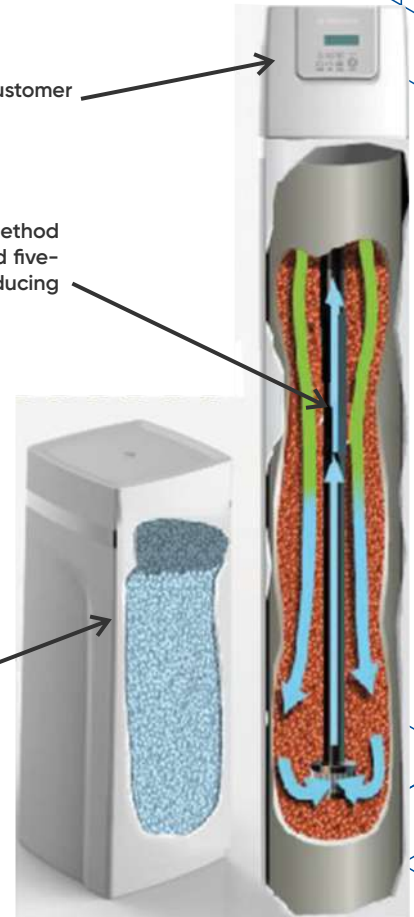

Bypass valve function as a softener standard.

With bypass valve, installation and maintenance is more convenient. Can be mixed on request, adjust the water hardness. Significant savings in equipment regeneration times.

High intelligent control valve body memory customer Usages, fully automatic regeneration control.

High Grade Resin The eight-step regeneration method maximizes salt utilization relative to the standard five-step regeneration method while significantly reducing the regenerated water consumption.

Dry salt storage of salt reserves, water before regeneration, to ensure salt water sanitation.
